1 Document Structur Formating

This is a standard text paragraph. You cna format words to be **bold**, *italiczed*,`monospaced` very easily.

To start a new paragraph, simply leave a blank line in your source code.

1.1 Creating Lists

Here is an itemized list of common structural milestones:

- Preamble setup (defining metadata and loading packages)
- Body environment(`document`)
- compiling to a PDF

2 Mathematical Equations

LaTex shines when typesetting mathematics. You can include inline math like $E = mc^2$ within a sentence, or display standalone equations on their own lines:

$$f(x) = \int_a^b \frac{1}{x}\,dx = \ln|b| - \ln|a| \tag{1}$$
